Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a
core greater than or equal to the score of the result being printed,
and is derived by analysis of the coal score distribution.

The invention provides a novel betal-like sub-unit for voltage-gated codium ion channel polygeptide, predictionly a sensory neurone specific channel (SMS) subunit. The novel betal-like subunit is useful for producting a therapeutic esent which is useful retarting pain in a patient. The subunit can be expressed by standard recombinant methodology. The presents a human novel sodium channel betal-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CACCAGAGGTGGAGAGCCCTTTCAGGGGCGCCTGCAGGAATGGCAGCAAGGACCTG 300
